

## WHAT IS YOUR DIAGNOSIS?

50 year old male, having a rapidly growing, raised, ulcerated tumor near inner canthus of right eye. It has a collar like base. There is an indurated scar on right cheek, fixed to the underlying bone.

### Differential Diagnosis :

1. Squamous Cell Carcinoma
2. Keratoacanthoma
3. Basal Cell Carcinoma

### History :

Patient was treated with X-radiation for Carcinoma of right cheek 6 months prior to the onset of this tumor. Biopsy shows in situ carcinoma of the epidermis with Collarette appearance of the periphery of the tumor.

---

Keratoacanthoma is a proliferative in situ carcinoma of the epidermis. It spreads locally rapidly. Local excision and electro-coagulation give the best results.

**Treatment :**

**Final Diagnosis : Keratoacanthoma**
