Author's reply

Sir,

The readers' interest in our article is appreciated as well as

their survey of literature. Here are the parameters: make - union medical laser UML 25; de-bulking in continuous wave an continuous mode 9 w to 12 w depending on size of lesion; terminal vaporization - 6.3 w uper pulse continuous; excisions - 6.3 w super pulse continuous coagulation 6W continuous wave; continuous mode - de-focused; asepsis - 10% povidone iodine 5 minutes prior to procedure; anesthesia - 2% lignocaine with adrenaline through a 30 g needle.

The spot size was 0.3 mm. Irradiances cannot be precisely calculated as the hand piece is a focusing hand piece. Hence the figures below are approximate:

- Power: 0.5 to 25 watts, continuously scalable by one decimal place
- Modes: continuous, super pulse [10 w]
- Repeat: 400 Hz
- Beam diameter: 0.3 mm
- On time: .01, 0.1, 0.2, 0.3, 0.5 sec
- Off time: 0.01 to 0.1 sec in continuous and super pulse modes
- Guide beam: Helium Neon, flux adjustable

Since we used a beam diameter of 0.3 mm, the fluence can be calculated as follows:

- Diameter = 0.3 mm = 0.003 cm,
- Hence radius [r] = 0.0015 cm
- Therefore $r^2 = 0.00000225$
- $\Pi r^2 = 0.000007065$
- Irradiance = Power [w] / Spot size $[\Pi r^2]$
 $= 4.2 / 0.000007065 = 594479 \text{ w/cm}^2$
- Super pulse is 0.9 milli seconds = 0.0009 sec
- Fluence = irradiance x time = 594479×0.0009
 $= 382 \text{ J/cm}^2$

The detailed delivery capabilities of the machine used by us are shown in Table 1.

True ultra pulse laser is a combination of very short pulse width and high amplitude and is the patented technology

Table 1: Delivery capabilities of the machine used

Power	Irradiance W/cm ²	Fluence J/cm ²
0.5	70771	63
1	141542	127
2	283085	254
3	424628	382
4.2	594479	535
6	849256	764
6.3	900000	810
9	1285714	1157

of one particular manufacturer; others marketed under the same name give the pulse width but not the amplitude and are no different from gated super pulse lasers in terms of their tissue effects. True ultra pulse laser is very expensive and cannot be recommended to all readers of our journal for indications where it is not needed. Besides, the haloed pages of our journal cannot be used to further the commercial interests of one manufacturer.

Pulse dye laser is not cited as this article is written to encourage Indian dermatologists to use an affordable device that is somewhat skill dependent and not to digress into the realm of expensive and difficult to maintain technologies.
