

Cutaneous *Paecilomyces lilacinus* infections in immunocompromised and immunocompetent patients: Retraction

The Journal retracts the article "Cutaneous *Paecilomyces lilacinus* infections in immunocompromised and immunocompetent patients"^[1] published in the July-August 2014 issue.

A reader pointed out that the two cases reported in the article had been previously published in two separate articles and there was near-complete overlap of patient data and images. When contacted, the author accepted that this was correct and was unable to provide a satisfactory explanation.

M Ramam

Editor-in-Chief, Indian Journal of Dermatology, Venereology, and Leprology (IJDVL)
