

A case of cutaneous horn arising in verrucous epidermal nevus

Figure 1: Multiple pigmented warty papules over the neck arranged in a linear fashion with overlying cutaneous horn

A 14-year-old male presented with multiple pigmented warty papules arranged in a linear fashion over the right side of the neck and right ear lobule since birth. Since the past one year, the patient noticed two skin-colored keratotic projections developing

from the same lesion [Figure 1]. Clinical and histological findings were consistent with the diagnosis of verrucous epidermal nevus with cutaneous horn.

Declaration of patient consent

The authors certify that they have obtained all appropriate patient consent forms. In the form, the patient has given his consent for his images and other clinical information to be reported in the journal. The patient understands that the name and initials will not be published and due efforts will be made to conceal identity, but anonymity cannot be guaranteed.
