

SUPPLEMENTARY FILE 2

Normal variants of genitalia and perianal region:^{7,18}

Normal anatomical variants in female genitalia and perianal region

Female genitalia

- Variants in hymen
 - Configurations: annular, crescentic, cribriform, septate, perforate, imperforate
 - Superior notch: hymenal edge
 - Hymenal bumps/mounds
 - External hymenal ridges
 - hymenal tags
 - thickened hymen
- Linea vestibularis: avascular line in the midline of the fossa navicularis
- Longitudinal ridges: vaginal mucosa
- Erythema of the vestibule
- Urethral dilatation on labial traction
- Periurethral/vestibular bands
- Perineal groove

Perianal region

- Skin tags
- Increased pigmentation
- Venous congestion
- Diastasis ani (wedge-shaped areas in midline)
